

ANIMALS BADGE

We need to take care of animals, both domestic and wild. Domestic animals, like cats and dogs, live in houses. Treat them nicely, feed them well, and make sure they get exercise and love. Wild animals live in nature. Treat them nicely, too, and don't destroy their homes or get in their way.

Fun Facts about Animals!

- Ladybugs don't all have spots. Some have stripes or no pattern at all.
- There are three types of honeybees: the queen, the workers, and the drones. A bee becomes queen by eating something called "royal jelly."
- Orangutans and humans share 97% of the same DNA! The word orangutan comes from two Malay words meaning "human of the forest."

Can You Find All the Ladybugs?

A Ladybug sighting means good luck.

☐ Warm-Blooded ☐ Cold-Blooded

How many LEGS? _____

Some people talk to animals. Not many listen though. That's the problem. — A. A. Milne

Animals are such agreeable friends - they ask no questions, they pass no criticisms. — George Eliot
