

ENVIRONMENT BADGE

We have only one Earth to live in, so we have to take care of it. Save the air by carpooling or taking public transportation. Save the water by enjoying shorter showers and turning the water off when you're not using it. Save the ground by planting trees and picking up trash. When in doubt, remember: Reduce, Reuse, Recycle!

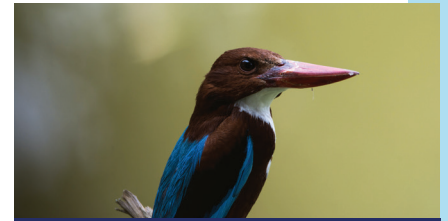

Fun Facts about the Environment!

- Composting turns some trash into rich soil. At one school instead of throwing away 45 pounds of lunch trash, they were able to compost 40 pounds and only send 5 pounds to the landfill!
- US National Parks protect over 84 million acres of land and nature.
- Antarctica has lost 148 billion tons of ice each year for 17 years.

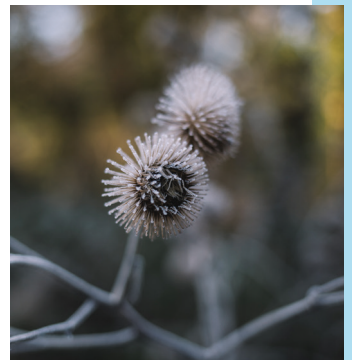

Are you inspired by nature?

Artists, engineers, architects, and inventors are constantly inspired by nature. How are you inspired by nature? Write or draw about it here.

The bullet train was inspired by the Kingfisher.

Velcro was inspired by the Burdock plant.
